Snowplows

Below is a small picture of a part of Akron. Mayor Plusquellic wants to reevaluate the plowing routes of the snowplows during the winter seasons in this area. The region that he is reevaluating is described by the following:

South of (and including) Route 764
East of (and including) S. Main St.
West of (and including) S. Arlington St.
North of (and including) E. Waterloo Rd.
Exclude I-77

Your assignment is to find the best path for a snowplow to travel to plow all of the roads in your region. One or more of the groups may have an adjacent region to your region, so it is in your best interest to work with them involving any “border” between your regions. Assume that all of the roads in your region are bi-directional (not one-way), and that each road has only one lane on each side.
