

## An opacity\_pro Demo File

D. P. Story

The `opacity_pro` pretty much needs distiller with the Adobe PDF Settings set to process the transparency operator. For your convenience, the Adobe PDF Settings file `Standard.transparency.joboptions` is included in the distribution. Place this file wherever distiller looks for the `.joboptions` files.<sup>1</sup>

The yellow and blue boxes are under the picture, which has opacity of 0.5 and the text which has opacity of 0.3, and blend type `Normal`, the default. The green and magenta boxes are on top the picture with opacity of 0.4 and blend type of `Multiply`.

This demo file uses only the most basic of packages: `color`, `graphicx` and `opacity_pro`. The other demo files assume the use of the `web` package, some use the `graphicxsp` package. Be sure to download all the latest versions of these.

---

<sup>1</sup>Go to `Settings > Edit Adobe PDF Settings ...` in the Distiller application window, then click the `SaveAs` button. A `Save Adobe PDF Settings As` dialog box opens, and you can then see where Distiller likes to save its `.joboptions` file. Copy the provided `.joboptions` to the folder and restart Distiller, the `Standard.transparency` should now be visible in the drop down `Default Settings` list.
