**The yt4pdf Package
Demo 2 of You Tube API**

D. P. Story

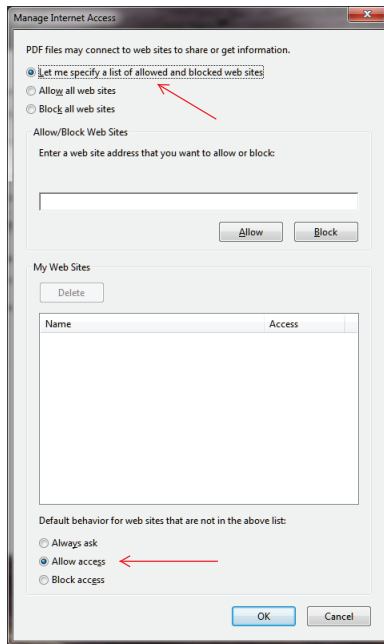

Configuring Preferences

To avoid the security alerts when loading FLV files from You Tube, configure your preferences as described below.

Start Adobe Reader 9 (or Acrobat 9), and open the **Preferences** dialog box (located in the menu system by selecting **Edit > Preferences** or using the shortcut **Ctrl+K**); select **Trust Manager** from the left-hand **Categories** panel. On the right side of the dialog box, press the button labeled **Change Settings...**, shown below.

In the **Manage Internet Access**, make selections as indicated by the arrows in the figure below. Now exit the dialogs, and try **PDF Tube!**

PDF Tube

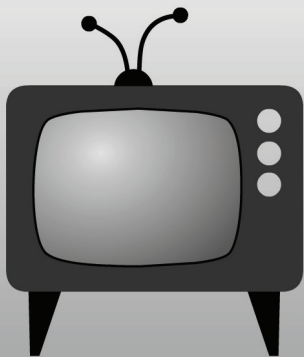

On this page, the You Tube annotation is icon size and the video is played in a floating window.

Move the window by dragging its title bar. Resize it by dragging the lower-right corner. Close the window by clicking on the upper-right corner.

The YT Menu uses the popupmenu package. Alternatively, we could just use the combo box that has been used already, but, I thought we might try something different.
