Hints for HW1n4

1. Call the nondimensional grouping β

1. Call the nondimensional grouping β
2. Use separation of variables

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1
5. Complete the square

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1
5. Complete the square
6. Relabel again, letting $y = \tilde{C} + \alpha$ and $A^2 = \alpha^2 + 2\alpha$

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1
5. Complete the square
6. Relabel again, letting $y = \tilde{C} + \alpha$ and $A^2 = \alpha^2 + 2\alpha$
7. Look up the integral, with a mind towards the inverse hyperbolic tangent

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1
5. Complete the square
6. Relabel again, letting $y = \tilde{C} + \alpha$ and $A^2 = \alpha^2 + 2\alpha$
7. Look up the integral, with a mind towards the inverse hyperbolic tangent
8. Solve for y

1. Call the nondimensional grouping β
2. Use separation of variables
3. Factor out the β from the denominator
4. Relabel $\frac{1}{\beta} = 2\alpha$ and multiply by minus 1
5. Complete the square
6. Relabel again, letting $y = \tilde{C} + \alpha$ and $A^2 = \alpha^2 + 2\alpha$
7. Look up the integral, with a mind towards the inverse hyperbolic tangent
8. Solve for y
9. Undo all those substitutions to get back to C
