

Handout 8 – Single Spacing Code in the Appendix

Here is some text in your appendix.

Plasma enhanced physical vapor deposition (PEPVD) is one method to coat nanofibers and nanostructures with thin film materials. Experimental efforts in coating electrospun polymer nanofibers suggest a complicated relationship between coating morphology and operating conditions. This motivates a theoretical model for coating growth. The model presented here assumes a coating growth that is uniform along the axial dimension of the nanofiber but non-uniform in the radial direction. The concentration of vaporized aluminum surrounding the coating growth is non-uniform due to the geometry of the coating growth, therefore modeling the morphology of the growth requires that the surrounding concentration field be determined. Now let's go to single spacing for the code itself

```
line one  
line two  
line three
```

Since this is a local environment, once we exit the code listing, we're back to double spacing.
