3450:625 Analytic Function Theory
Prof. Timothy S. Norfolk, Ph.D.
Spring 2014

• “Someone once told me that grad school is intended to make smart people feel dumb. This course did exactly that. But I learned a lot and thoroughly enjoyed the course.
Thank you!”

Spring 2012

• “I would prefer if Dr. Norfolk did not advertize his karate training. I spent the whole semester constantly concerned about a roundhouse kick to the face.”
• “First class I’ve ever had with Dr. Norfolk in 5 years and I loved it. It’s like Top Gear with Math.”

Spring 2007

• “Excellent instructor.”
• “Excellent professor.”
• “Your tests are always a nightmare.”
• “Dr. Norfolk is a professor who really does care about his students learning, and he tries to make class fun and interesting while still staying focused and on topic. This subject was very hard for me but I did learn a lot. I appreciated take-home tests so that I could take time to do the work and look up theorems when I needed to.”
• “It was a tough course! A lot of material was covered and the course could have been 2 semesters! Dr. Norfolk rocks my world!”
• “Great at explaining difficult topics all the while taking the occasional break for some much needed humor.”

Spring 2006

• “I think that such a rich area needs more time dedicated to it. Perhaps a followup course or 4 hours a week.”
• “Dr. Norfolk is my favorite prof!”
• “I’d definitely take this prof again. What a great teacher! One of the best math profs I’ve ever had. I’d love to have him again - he really taught for *retention*, not memorization. I know I learned a lot in here, and I think I can apply it to other classes now.”
Spring 2005

- “Dr. Norfolk not only showed an interest in student success, but demonstrated a high level of knowledge in the subject area. I rate the course and the instructor as excellent. Also, Dr. Norfolk was very helpful (sic) in office hours and always encouraged students to attend his hours.”
