3450:636 Advanced Combinatorics and Graph Theory

Prof. Timothy S. Norfolk, Ph.D.

Fall 2005

• “Every semester I get a professor who assumes the universe revolves around his/her class. Thank God Dr. Norfolk is not one of those Professors (sic)”

• “Great teacher! Loved his classes and will take more courses under him.

Computer solutions/methods were discussed. We were introduced to (illegible word) applications of graph theory.”

• “Give more explanation for grading methods to help students better understand what they missed. Overall a good course, taught with a lot of enthusiasm. I it (sic) really helped.”

• “Love Dr. Norfolk’s class!”

• “Excellent teacher. Lectures were kept fun and interesting.”

• “I really enjoyed the course and found that take-home tests are very fair for this type of material. Dr. Norfolk was very willing to help with any questions we had, and explained the material very well.”

• “I’ve always enjoyed taking courses from Dr. Norfolk. He’s always well-prepared and makes the learning environment fun and relaxing. I regret that this is the last course I will get to take from him.

Dr. Norfolk is also very accessible for office hours. He is always willing to help you find answers to your own questions.”
Fall 2003

- “I know that the second half of the course was mostly algebra & that’s why we went faster but I think at this point – not having taken the final yet – that the amount of information to be covered seems immense and could have been split over two tests.”

- “The instructor’s enthusiasm and knowledge in the course was very much appreciated. Both characteristics made the course enjoyable and educational. Thank you for a great class.”
