Honors Calculus II Projects

- On or before Friday 22 April, turn in a one page progress report on your semester project. The report should indicate what you have done so far, what you need to do to complete the project, and a list of difficulties or potential difficulties. Write it in a formal manner (complete sentences and ideas).

- Projects are due on Wednesday 4 May, in the last week of classes.

- Focus on the aspect/s of the topic that interest you. Generally speaking, it isn’t necessary to do everything that might appear in the materials I provided to you.

- Stop by and show me what you’ve done so far, especially if you’re stuck. I may have a suggestion for a specific example for you to look at. I’ll be happy to discuss what should go into your final report.

- Reports should have elements of these four items (some projects may not fit the format exactly, of course):
  1. A concise statement of the problem
  2. A general discussion of the mathematics used in the problem
  3. One or more specific examples
  4. An interpretation of results and a discussion of their significance

The length of the report is not terribly important. The completeness and quality of the report are more important. If you submit a total of one page, it’s probably too short. If your report is 20 pages, it’s probably too long. My guess is that 4-5 written pages is about average, with a wide variance in the number of figures, plots and pictures.
